Usage of S -expressions and predicate expressions in procedural programming languages.

(English) [Zbl 0845.68019](#)

Filomat 9, No. 2, 315-324 (1995).

Summary: An extension of a procedural programming language with S -expressions and predicate expressions is described. Several examples in the field of graph theory, logic and set theory, hash tables, and sparse matrices are presented.
