Princeton, NJ: Rinton Press (ISBN 1-58949-015-0/hbk). xiv, 427 p. (2001).

The articles of this volume will be reviewed individually.

Publisher’s description: This volume is about newest developments in three subfields of theoretical high-energy physics: particle phenomenology, string theory and theoretical cosmology. At the start of a new millennium these fields show an unprecedented and exciting amount of mutual dependence and interaction.

Indexed articles:
