

Schoen, Robert

The two-sex multiethnic stable population model. (English) Zbl 0597.92019
Theor. Popul. Biol. 29, 343-364 (1986).

This paper is a continuation of previous results of the author [Demography 18, 201-216 (1981) and J. Math. Biol. 18, 201-211 (1983; [Zbl 0532.92019](#))] and examines demographic interactions between population groups. Specifically he discusses a two-sex multiethnic stable population model and it is shown that multiethnic stable populations are possible when an intergroup fertility is observed.
