MSC:

03D15 Complexity of computation (including implicit computational complexity)

Cited in **45** Documents

03D10 Turing machines and related notions

Keywords:

encoding computations of alternating Turing machines; upper and lower bounds; Presburger arithmetic; theory of reals with addition; time versus space problem; complexity measure; alternations

Full Text: [DOI](#)

This reference list is based on information provided by the publisher or from digital mathematics libraries. Its items are heuristically matched to zbMATH identifiers and may contain data conversion errors. It attempts to reflect the references listed in the original paper as accurately as possible without claiming the completeness or perfect precision of the matching.
