

**Neumaier, A.**

**Some sporadic geometries related to PG(3,2).** (English) Zbl 0509.05026

Arch. Math. 42, 89-96 (1984).

For a scan of this review see the [web version](#).

**MSC:**

**05B25** Combinatorial aspects of finite geometries  
**05C25** Graphs and abstract algebra (groups, rings, fields, etc.)  
**51E25** Other finite nonlinear geometries

Cited in **3** Reviews  
Cited in **24** Documents

**Keywords:**

Buekenhout geometry; almost building; Hoffman-Singleton graph; near octagon; Leech lattice

**Full Text:** [DOI](#)

This reference list is based on information provided by the publisher or from digital mathematics libraries. Its items are heuristically matched to zbMATH identifiers and may contain data conversion errors. It attempts to reflect the references listed in the original paper as accurately as possible without claiming the completeness or perfect precision of the matching.
