

Towers, John D.

Two methods for discretizing a delta function supported on a level set. (English)

Zbl 1115.65028

J. Comput. Phys. 220, No. 2, 915-931 (2007).

Let $f : \mathbb{R}^n \rightarrow \mathbb{R}$ and $u : \mathbb{R}^n \rightarrow \mathbb{R}$ be smooth functions which are given by their data on a grid. Let Γ be the zero level set of u . The author considers the problem of approximating the integral $\int_{\Gamma} f(x) ds$. It is common practice to replace the integral above by

$$\int_{\mathbb{R}^n} f(x) \delta(u(x)) \|\nabla u(x)\| dx,$$

where δ denotes the Dirac delta function. Then one approximates this integral using the available grid-defined function values. The author proposes two methods for discretization of $\delta(u(x))$.
